

1. Consider Table 4 (p. 190) in Sundstrom and David (1988).
  - (a) Translate the regression results in each “coefficients” column into words.
  - (b) If you were running this regression, what two additional variables would you want to include?
  - (c) What effect would you expect each of those variables to have?
  
2. Consider Table 1 (p. 494) in Lahey (2014).
  - (a) Translate the regression results in each column into words.
  - (b) What are some of the additional covariates Lahey tries in her baseline regression?
  - (c) If you were running this regression, what two additional variables would you want to include?  
What effect would you expect each of those variables to have?
