

1. Consider Table 7 in Collins and Wanamaker (2014).
 - (a) What is the dependent variable in the regression? What are the independent variables used in column 2 of Table 7?
 - (b) How do the first two columns of Table 7 differ from the third column of Table 7?
 - (c) What changes in columns (4a) and (4b) of Table 7 relative to the earlier columns?
 - (d) What changes to the authors make to their regression in columns (5a) and (5b) of Table 7 relative to the earlier columns?
 - (e) What can you conclude about the role of unobservable factors potentially biasing estimates of the returns to earnings for black migrants between 1910 and 1930?
